

Part of the SCL PCB Solutions Group

## QUALITY POLICY STATEMENT

Our mission is to provide a high level of customer satisfaction and receive customer recognition as their “supplier of choice” for the products and services that we offer. We aim to respond to requirements for prototype and small to medium volumes of Printed Circuit Board (PCBs) via manufacture at our UK facility, whilst sourcing higher volumes and/or higher technologies from SCL PCB Solutions sister companies and/or approved suppliers as part of our Brokered business.

Our Quality Management System (QMS) is integrated with other management systems and practices to ensure that we satisfy customer, statutory and regulatory requirements and we are focussed on meeting the needs and expectations of relevant interested parties that include our customers, employees and shareholders, with Top Management providing the leadership and resources required to achieve our high expectations for **customer satisfaction, product quality and on time delivery.**

Top Management are committed to the continuous improvement of the management system and ensuring that quality requirements are translated into objectives with Key Performance Indicators (KPIs) that are periodically reviewed to determine whether the system remains suitable and effective for the strategic needs of the business and whether opportunities for improvement exist.

The methods and success of communicating this Quality Policy and our objectives at appropriate levels throughout the company is periodically reviewed.
